# Park Light System

## Switch on safety

### This Park Light System makes a trailer legal, visible and safe

The Park Light System (PLS) is battery-powered and uses the existing lighting system for active illumination of a trailer without a towing vehicle, when a trailer is left on an unlit road or vehicle park.

Safe loading and unloading is therefore always possible, even without a towing vehicle, with greater safety for other road users after dark.

## ERMAX Park Light System - why?

- 1 Increased traffic safety**  
Parked trailers are illuminated, increasing traffic safety for others and avoiding collision damage.
- 2 Quick, easy installation**  
Plug & play installation in connection with the ERMAX lighting systems - quick and easy.
- 3 Flexible location of junction box and switch**  
A junction box can be placed where it is most optimal on the vehicle. Switch can be placed where most accessible.
- 4 Retrofitting**  
Easy retrofitting on an ERMAX lighting system - plug & play.
- 5 Safe loading and unloading**  
By connecting the interior light and work light, safety and comfort when working on and around a trailer are increased.
- 6 Standard systems**  
2 standard systems according to requirement, and the option of activation other lights, e.g. work, warning, flash or interior lights with an extra switch.
- 7 Battery box**  
Compact, simple design with up to 48 hours of battery life, depending on which lights are connected. ADR approved.
- 8 Battery charging**  
Automatic charging when trailer is connected via pin 9 (ISO 12098).

# Ready to park legally and safely

It doesn't get any easier!

## Standard or customer-specific system - we've got the solution

The ERMAX Park Light System comes in two standard versions, with the option of either a work, warning, flash or interior light connected. If you have special needs, we'll find the solution.

### PLS BASIC system

The junction box of the basic system is configured so that the front position light and the outer end marker light comprise the parking light (marked in red).

All you need for the PLS are the **blue parts**  
**item number. TM092050001 (ADR approved)**

- Junction box 099 864 050
- Battery box
- On/off switch
- Connection cable

The **green parts** are optional products, connected via an extra switch:

- Work light
- Warning light
- Beacon
- Interior light

### PLS PREMIUM system

The junction box of the premium system is configured so that all position lights comprise the parking light (marked in red).

All you need for the PLS are the **blue parts**  
**item number. TM092050002 (ADR approved)**

- Junction box 099 864 051
- Battery box
- On/off switch
- Connection cable

It's also possible to connect the **green parts** listed and shown above to the Premium system.
